

Gunnar Mühlstädt
CEO, MINT Engineering GmbH

Gunnar Mühlstädt is the CEO of MINT Engineering GmbH. He was awarded his engineering degree at the Technical University of Dresden, before moving to a prominent Swiss industrial corporation, where he gained more than 10 years of experience in national and international plant engineering sales. He was also largely responsible for automation within the organization. He assisted with the development of the photo-bioreactor system for microalgae for several years, before founding MINT Engineering GmbH in 2016. He has been continually driven by the vision of making the product of microalgae for industrial purposes more professional and to establish innovative algae production technologies in doing so. The focus of MINT Engineering is on the further development of stable and effective processes and systems for the economic cultivation of microalgae. Intelligent automation of processes plays a significant role in this.

Alongside that, he works with a team on “GBEX - Global Biomass Exchange”, a B2B marketing platform that creates quality standards and customer-friendly processes in order to simplify the marketing of high-grade microalgae and the development of algae-based products. Photo credit: Jan Gutzeit
